XPrintz User Guide

How to upload artwork, choose a size, and keep your print safe.

1. Choose a size

If this product comes in more than one size, the choices sit under the artwork card.
Select the size you want. The card changes to that exact width and height.
A product with one size does not show a size list.

2. Upload your design

Drop your file on the card, or click Browse Files.
Use Change if you need a different file. Rotate, Fit To Bleed, and Fit To Area
are in the bar above the card.
Click Next when the preview looks right.

3. Bleed and safe area

Bleed is the extra edge that is trimmed off. Extend backgrounds and photos
to the red bleed line so the print does not show a white edge.
The safe area sits inside the trim. Keep text, logos, and important details there.
You can set bleed and safe area separately in inches, mm, cm, or pixels.

4. Finish the order

Next opens the design review. Check the front and back, then approve the design.
Finish continues to your options and cart.

Files we accept

JPG, JPEG, PNG, GIF, WEBP, SVG, PDF, AI, EPS, PSD, PPT, PPTX, TIF, and TIFF.
PDF is the best file when the design is already finished.
Use a high-resolution image so type and photos stay sharp.

Before you send the file

Match the file to the size you selected. Do not stretch a small file to a larger size.
Leave a margin inside the safe area. Do not place type on the trim edge.
Extend color and photos into the bleed so trimming does not cut them short.
Check spelling, phone numbers, and web addresses on the review screen.

Templates

PDF, SVG, and Adobe Illustrator buttons on the same panel download a blank template for the size you selected. Build your art in that file, then upload it.

Need help

Use Save Draft if you want to come back later. Your file stays with your account.
If the preview does not match the print you want, change the size and upload again.
